Individual Contribution Statement

Safety-Jacket Follower Robot | Intelligent Systems and Robotics, Final Project | 30 October 2026

This project was completed in a pair. The table states what each member was responsible for.

Member	Responsibilities
Jamugisa Peter Paul S25M25/008	**Detector:** recording robot-camera data, automatic labelling with Grounding DINO and checking the labels, building the training dataset, fine-tuning YOLOv8n (You Only Look Once version 8, nano size) in versions 1 and 2, and independent evaluation on three test sets. **Physical deployment:** the robot server, the ROS 2 (Robot Operating System 2) bridge to the robot, camera and motor calibration, safety fixes (motor power cap, boot-time motor stop) and the live robot tests.
Ayebare Moses S25M25/003	**ROS 2 (Robot Operating System 2):** the `jacket_follower` package with the detector, follower, bridge, scenario and metrics nodes, launch files and parameters. **Gazebo:** the MasterPi robot model, the hall world, the people models, the three scenarios (normal, speed changes, challenging), the failure-case ablation, ground-truth metrics and the simulation evaluation.
Shared	The final report, the presentation slides and the user manual.

We confirm that this statement is accurate.
